

What is claimed is:

1. A method for forming a vessel body in which a material is charged in a negative mold, and pressed to and spread on a mold surface by means of a rotating cylindrical rotary trowel to form a vessel body.
2. A method claims in Claim 1 in which a negative mold is a rotatable type.
3. A method for forming a vessel body claimed in Claim 1 in which a negative mold is rotated in the same direction of a rotary trowel with force thereof at a surface rotational speed of the mold lower than that of the rotary trowel to form a vessel body.
